Patient Profiles & Patterns

- **Most common profile:** Male, older adult

- Gender and age-specific patterns:
    - Female older adults → diabetes
    - Male older adults → cancer

Key Insights

1. Arthritis is common in young adults but shows the highest number of abnormal test results.

2. Older adults are the majority of patients, with chronic conditions like asthma, diabetes, and cancer being prevalent.

3. Elective admissions dominate, indicating planned treatments over emergency visits.

4. Insurance coverage is heavily skewed toward Cigna, which also pays the largest portion of bills.
